

Marcus S. Parker Sr. PMP®, LSSBB,CSM®

February 10, 2015 American Society of Quality Baltimore, Maryland
Section 0502

HOW QUALITY PROFESSIONAL'S CAN USE THE BASIC QUALITY TOOLS TO EFFECTIVELY COMMUNICATE TO EXECUTIVES

"Due to budget cutbacks we are combining our annual employee dinner with The Seven Basic Quality Control Tools Training."

Key Definitions

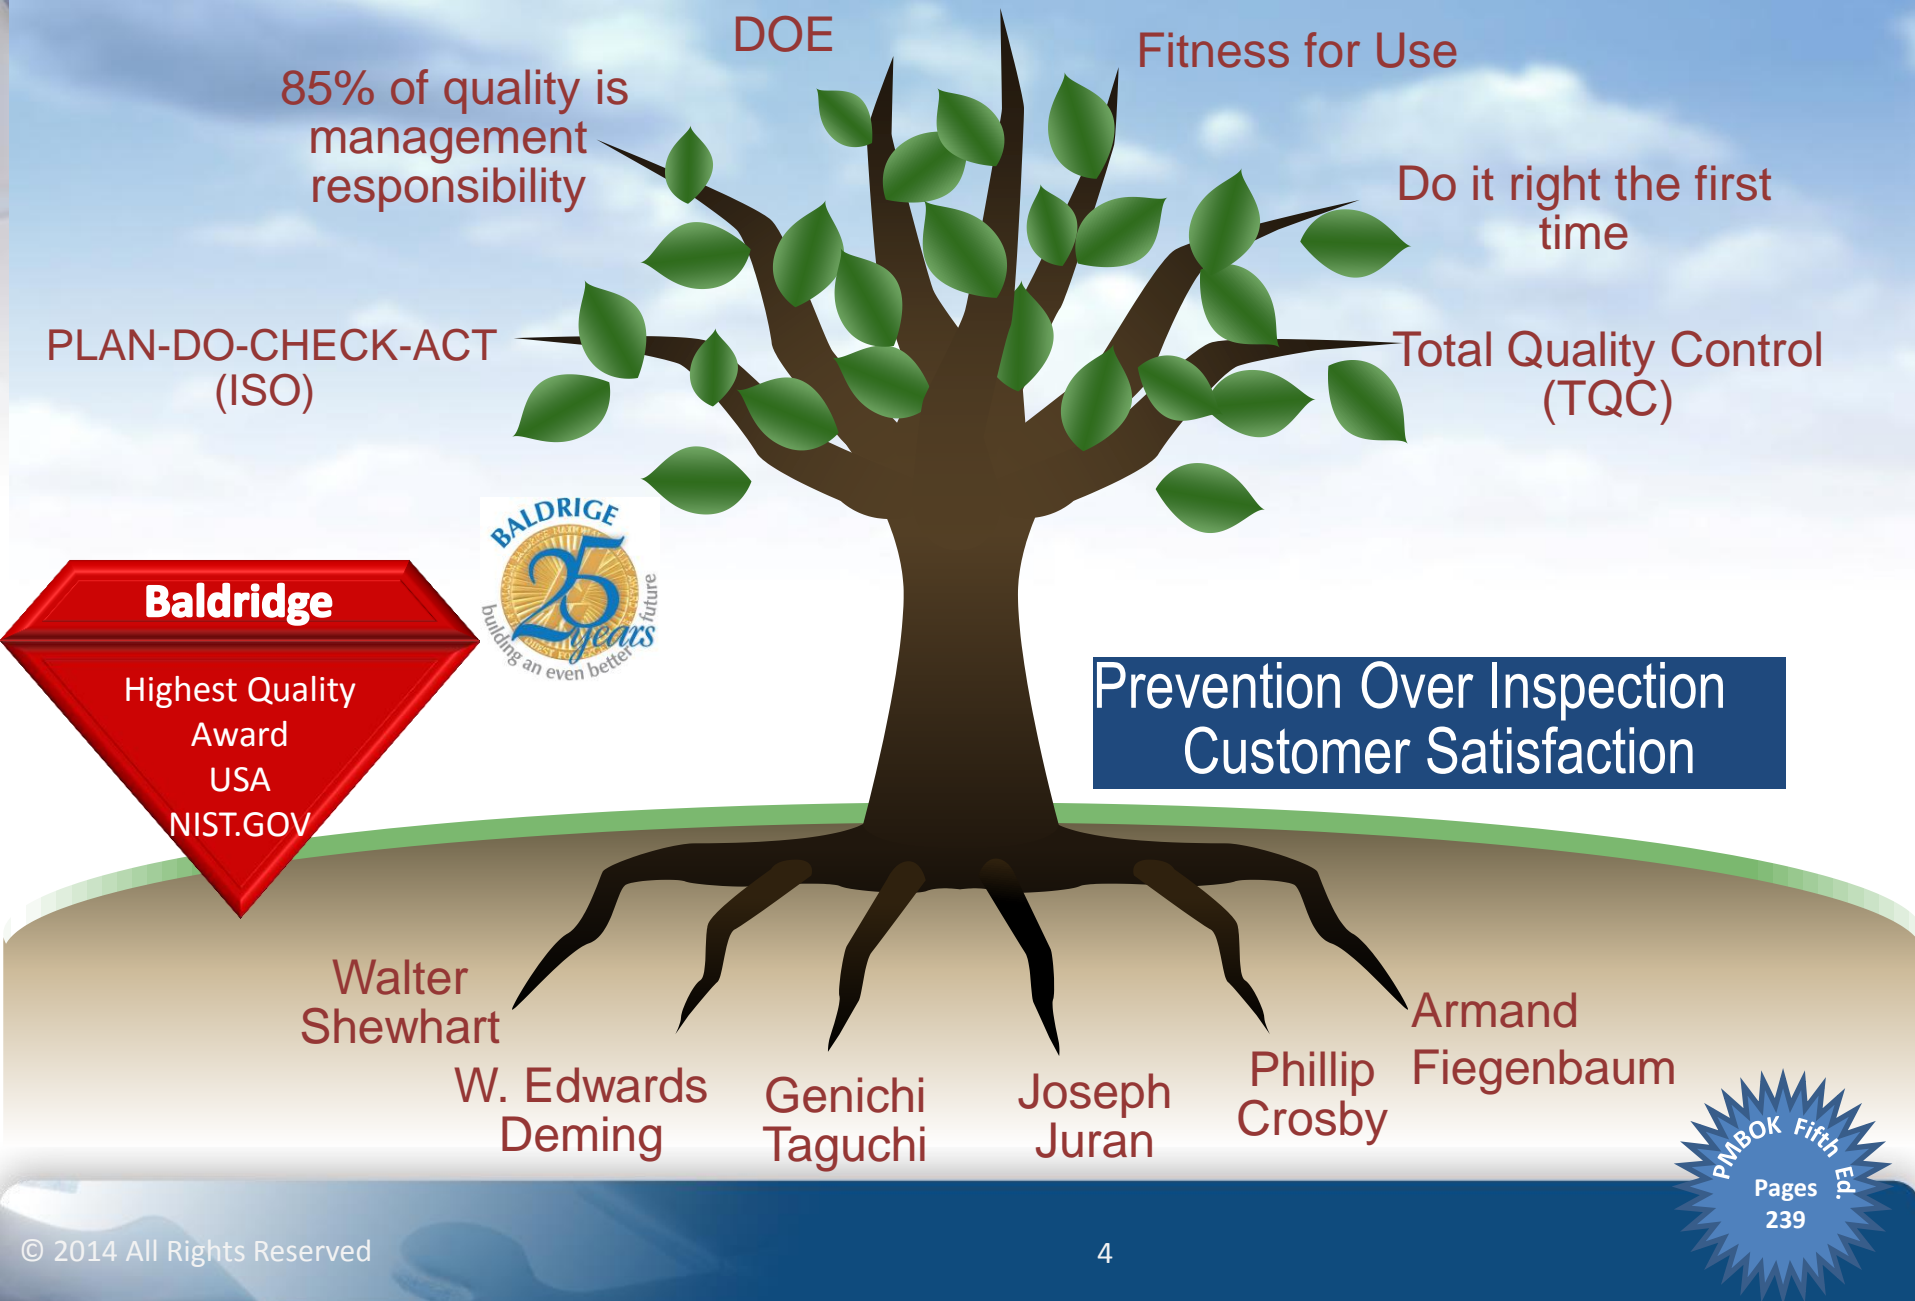

Project: is a temporary endeavor undertaken to create a unique product, service, or result.

PMBOK® Guide-Fourth Edition

Project management: The application of knowledge, skills, tools and techniques to a broad range of activities to meet the requirements of a particular project

Process Improvement Methodology

Define

Measure

Analyze

Improve

Control

Activities

- Review Project Charter
- Validate Problem Statement & Goals
- Validate Voice of Customer and Voice of Business
- Validate Financial Benefits
- Validate High-Level Value Stream Map and Scope
- Create Communication Plan
- Select and Launch Team
- Develop Project Schedule

- Value Stream Map
- Identify Key Input, Process and Output Metrics
- Collect Baseline Data
- Determine Process Capability

- Identify Potential Root Causes
- Estimate Impact of Root Causes on Key Outputs
- Prioritize Root Causes

- Evaluate, Select, and Optimize Best Solutions
- Develop and Implement Pilot Solution
- Develop Full Scale Implementation Plan

- Develop SOP's, Training Plan and Process Controls
- Implement Solution & Ongoing Process Measurements
- Transition Project to Process Owner

Identify and Implement Quick Improvements with Rapid Improvement Event (RIE)

Requires good Project Management Skills

Tools

- Project Charter
- Voice of the Customer
- **SIPOC Map**
- RACI and Quad Charts
- Stakeholder Analysis
- Communication Plan
- Effective Meeting Tools
- Inquiry and Advocacy Skills
- Time Lines, Milestones, and Gantt Charting
- Pareto Analysis

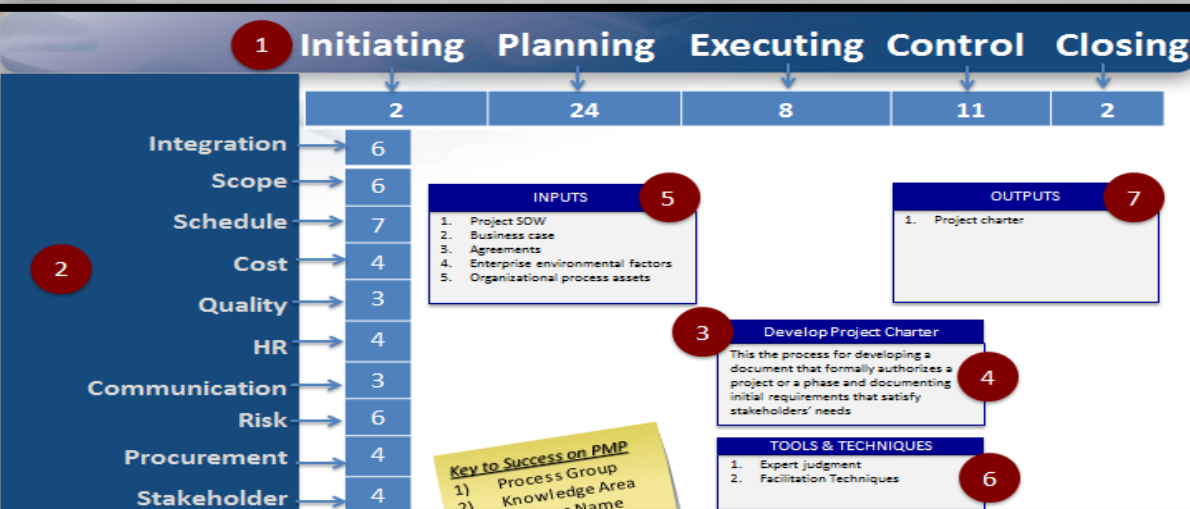

- Value Stream Mapping
- Operational Definitions
- Data Collection Plan
- Statistical Sampling
- Gage R&R
- **Run Charts**
- **Control Charts**
- **Histograms**
- Normality Test
- Process Capability Analysis

- Process Constraint ID
- **Fishbone Diagram**
- FMEA
- Hypothesis Tests/Conf. Intervals
- Simple Regression
- **Pareto**
- ANOVA
- Components of Variation
- **Scatter Plot**
- Queuing Theory

- Replenishment Pull/Kanban
- Stocking Strategy
- Process Flow Improvement
- Process Balancing
- Analytical Batch Sizing
- Production Maintenance
- Design of Experiments (DOE)
- Solution Selection Matrix
- Piloting and Simulation

- Mistake-Proofing/Zero Defects
- Standard Operating Procedures (SOP's)
- Process Control Plans
- **Visual Process Control Tools**
- **Statistical Process Controls (SPC)**
- Solution Replication
- Project Transition Model
- Team Feedback Session

Project Management Framework

Which Basic Quality Tools Do you know the least about?

i Start this poll to accept responses

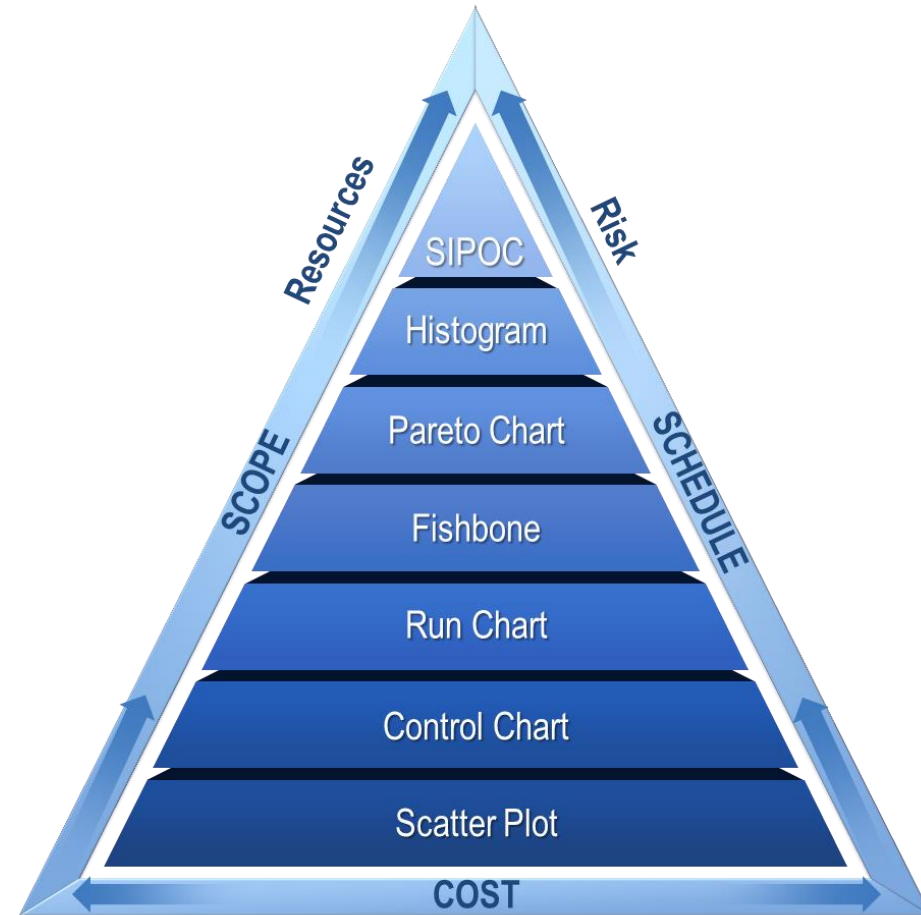

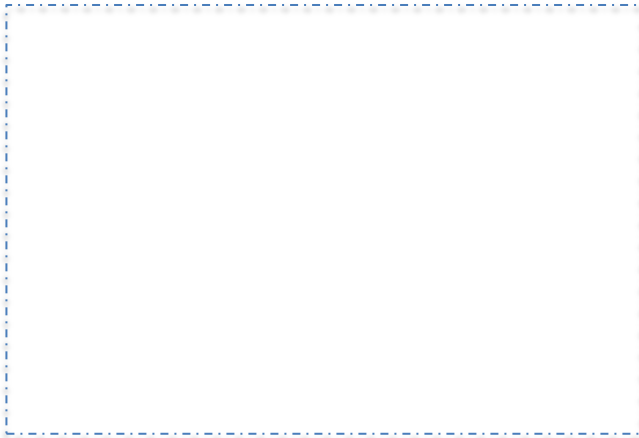

(S)uppliers (I)nputs (P)rocess (O)utputs (C)ustomers

Overview:

When To Use:

Result:

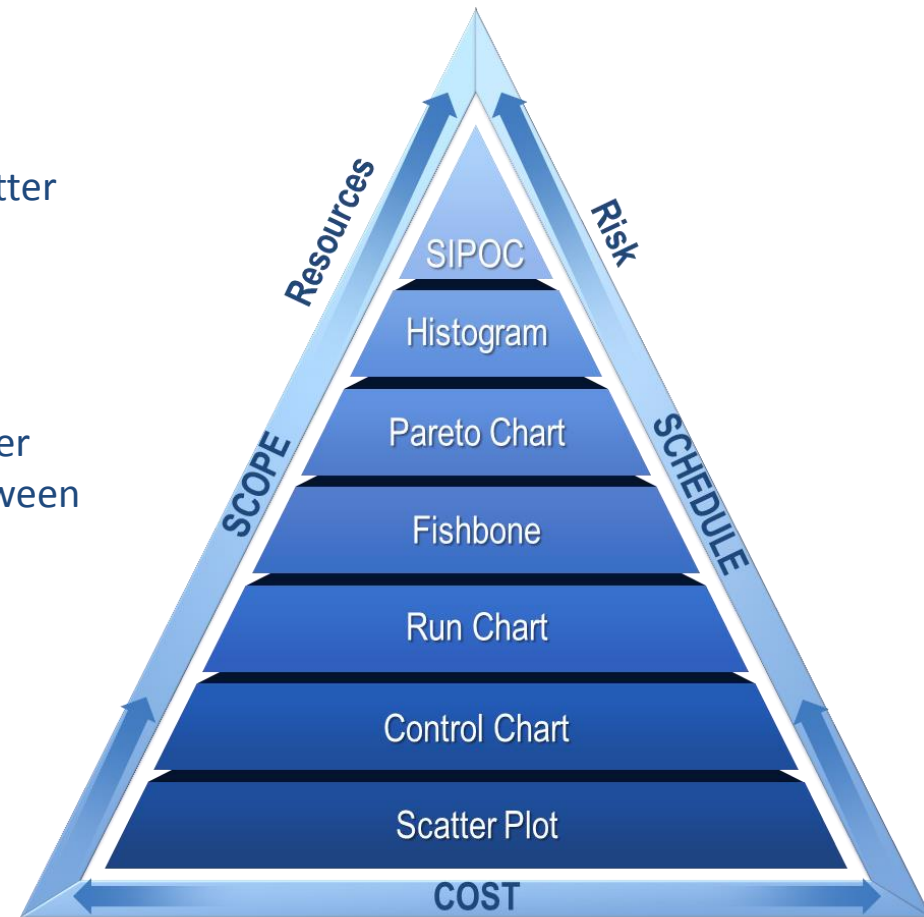

(S)uppliers (I)nputs (P)rocess (O)utputs (C)ustomers

Overview- High-level Process Mapping Tool used to decompose complex process into 5 to 7 high level steps and identify (S)uppliers, (I)nputs, (O)utputs and (C)ustomer's

When To Use- When you have a group of subject matter experts who know the process very well. It will help identify process characteristics such as Trigger Event, Gaps, Business Rules

Result- Team Building, Understanding of where further detail process mapping is required, relationships between Supplier's and Customer's , Inputs, and Outputs

(S)uppliers (I)nputs (P)rocess (O)utputs (C)ustomer				
Suppliers	Inputs	Process	Outputs	Customer
1. Customer	1. Order 2. Samples	Customer Sends Order	1. Purchase Order	1. Customer Service Rep (CSR)
1. Customer 2. Sales Rep	1. Order	Customer Service Enters Order	1. Order Number	1. CSR 2. Warehouse 3. Accounting
1. CSR	1. Order QTY & Style 2. Ship Date	Customer Service Confirms Order	1. Qty 2. Style 3. Ship Date 4. Price	1. Customer
1. CSR	1. P.O.# 2. Customer Address 3. Style/Color/Qty 4. Ship Method 5. Shipper #	Upload to Warehouse	1. Complete Order	1. Warehouse
1. Warehouse Management Sys.	1. Complete Order	Warehouse Pick's Order	1. Fulfilled order	1. Shipping Dept.
1. Warehouse	1. Packaged Order	Ship Order	1. Tracking # 2. Email CSR-POD	1. Customer 2. CSR 3. Accounting
Customer Receives Order				

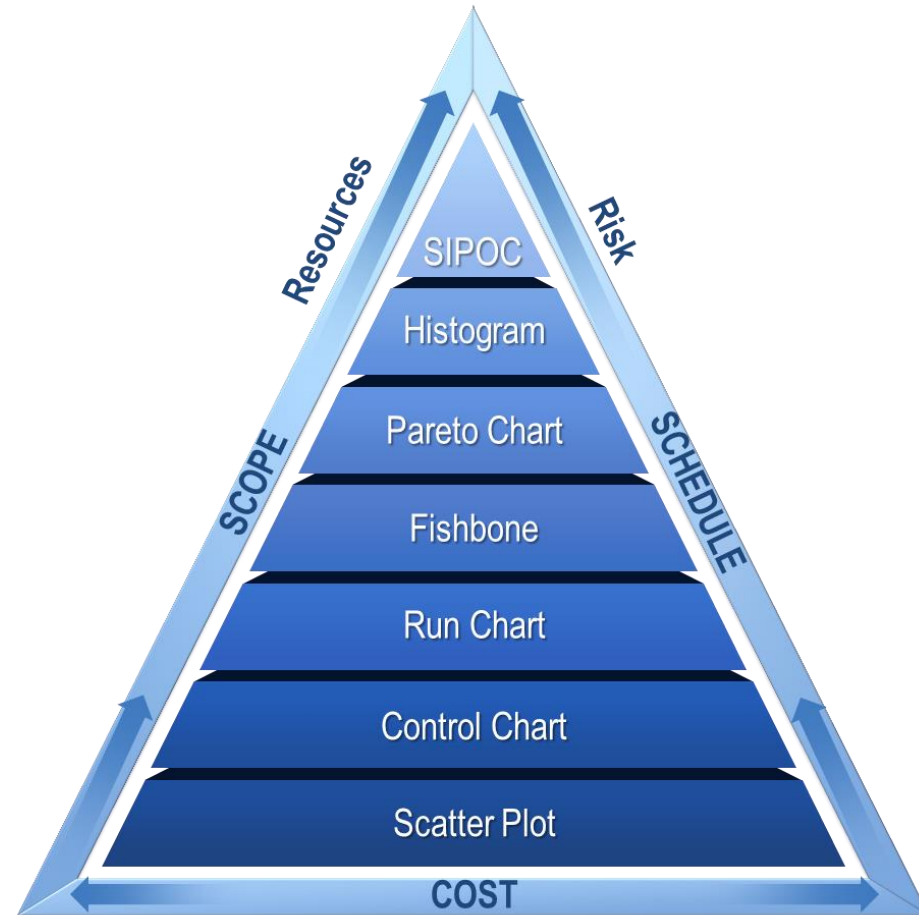

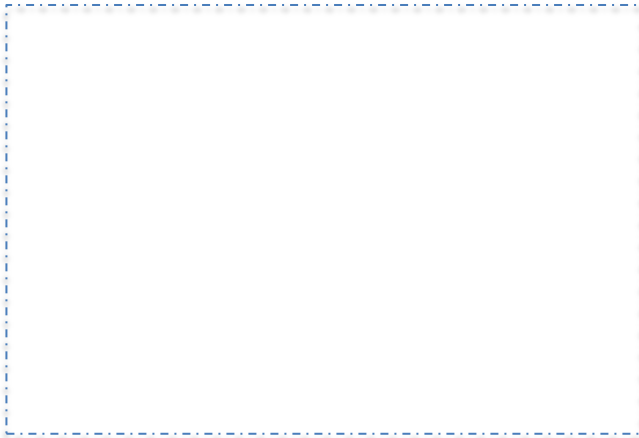

Histogram

Overview:

When To Use:

Result:

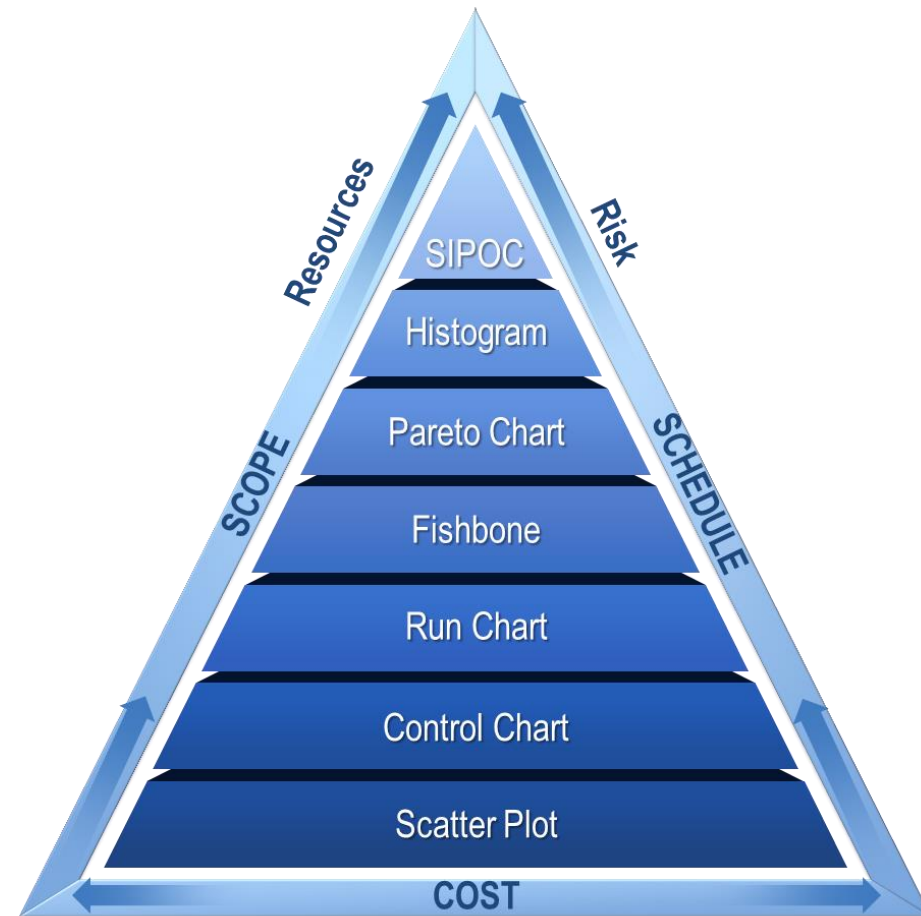

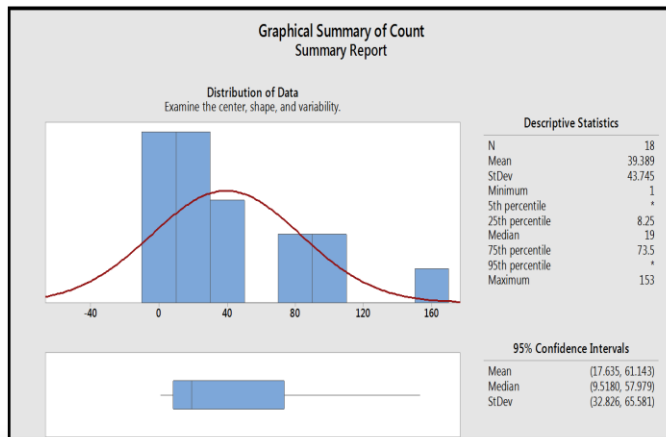

Histogram

Overview- Bar chart that displays the frequency, distribution, and central tendency of a data set over a period of time

When To Use- To identify changes or shifts in the process and understand variation. Used also to determine if the process is capable of meeting customers requirements

Result- With enough data it can represent the populations, can interpret centering variation or spread, is the shape “normal” or “skewed”, and process capability

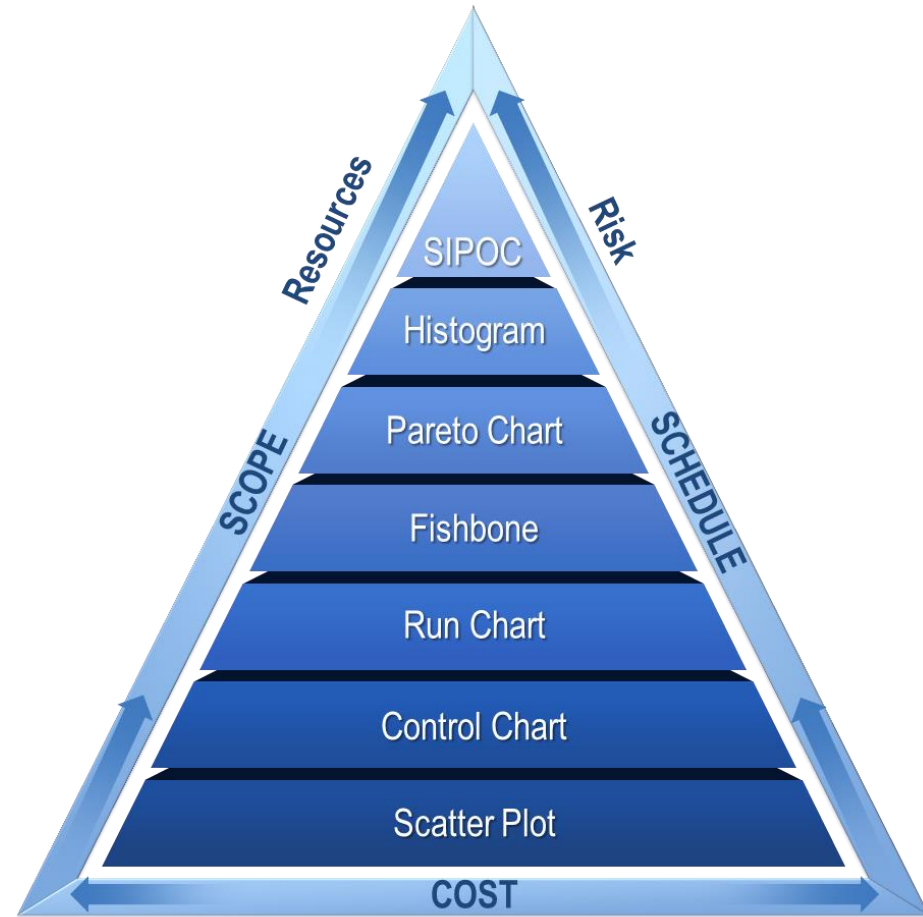

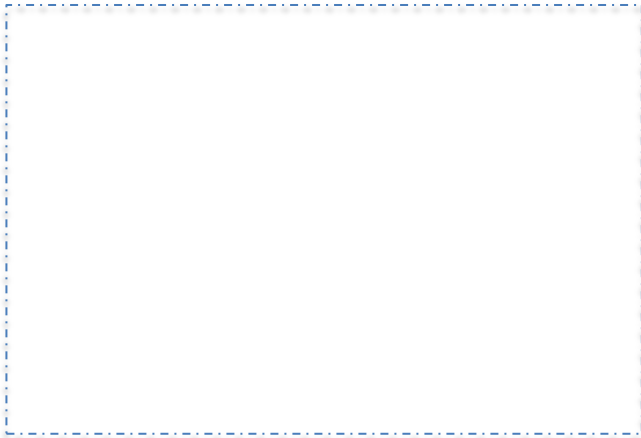

Pareto Chart

Overview:

When To Use:

Result:

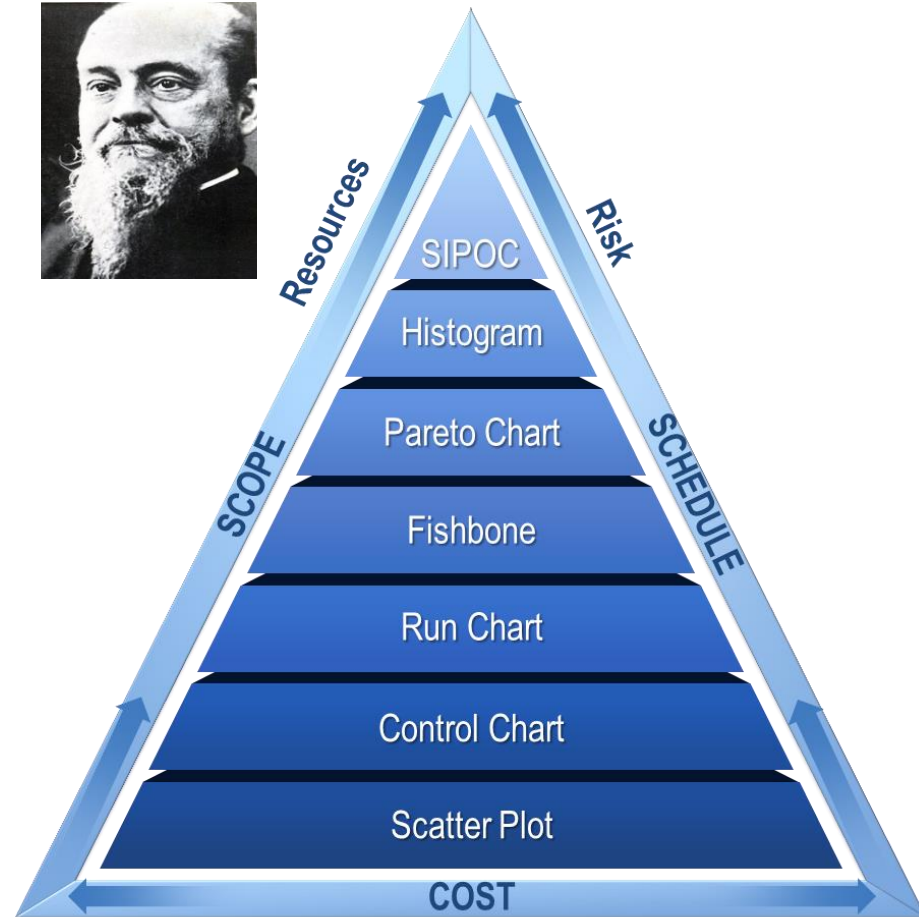

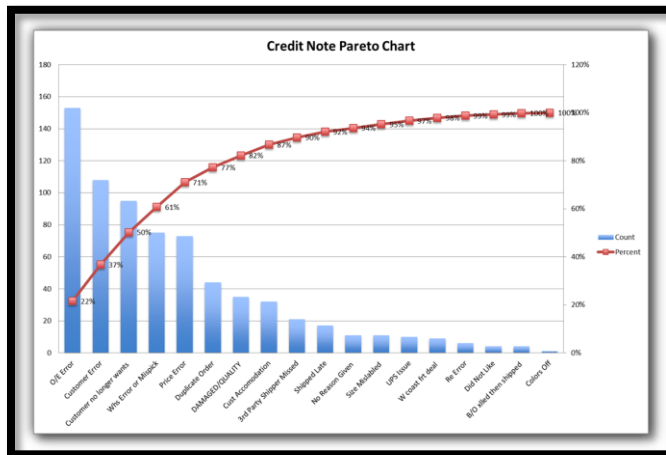

Pareto Chart

Overview- Named after Vilfredo Pareto, a 19th Century Italian economist who postulated that large share of wealth is owned by a small percentage of the population. It is a series of bars whose heights reflect the frequency or impact of problems

When To Use- It breaks down big problems down into manageable pieces. Its helps identify the “vital few” problems for the team to focus on

Result- 80% of the issues/problems are generated by 20% of the process steps

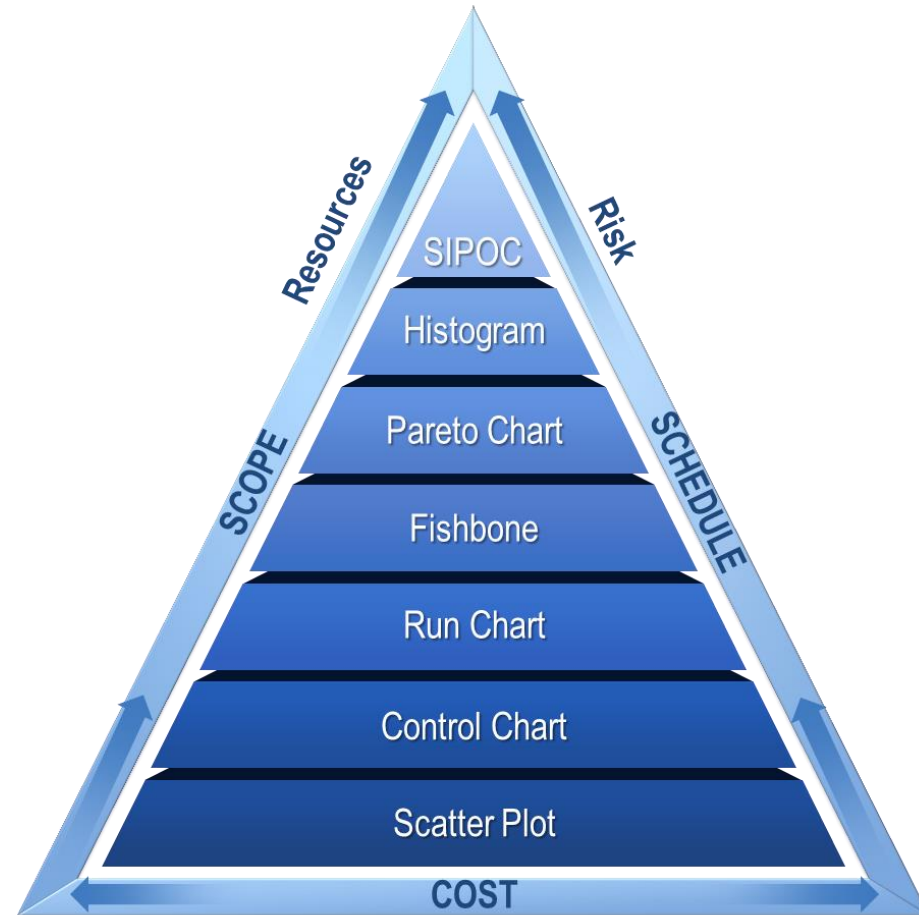

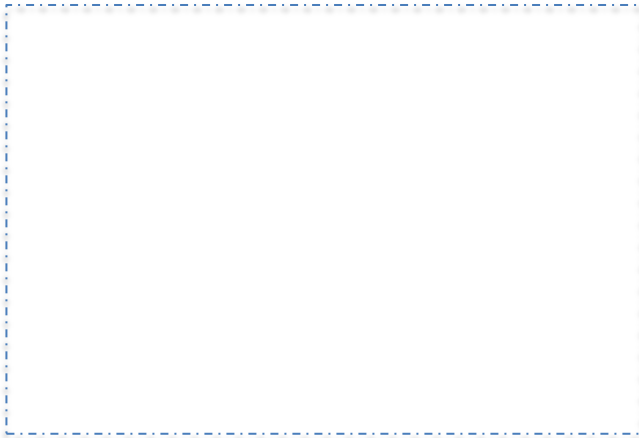

Ishikawa Fishbone Diagram

Overview:

When To Use:

Result:

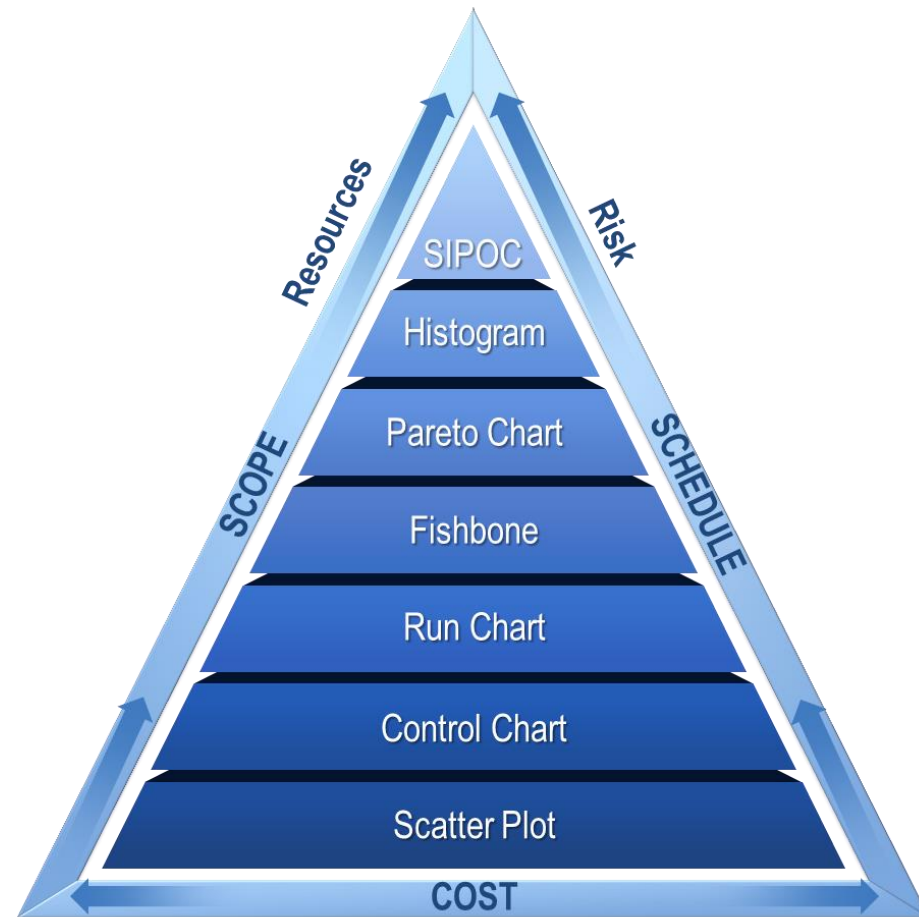

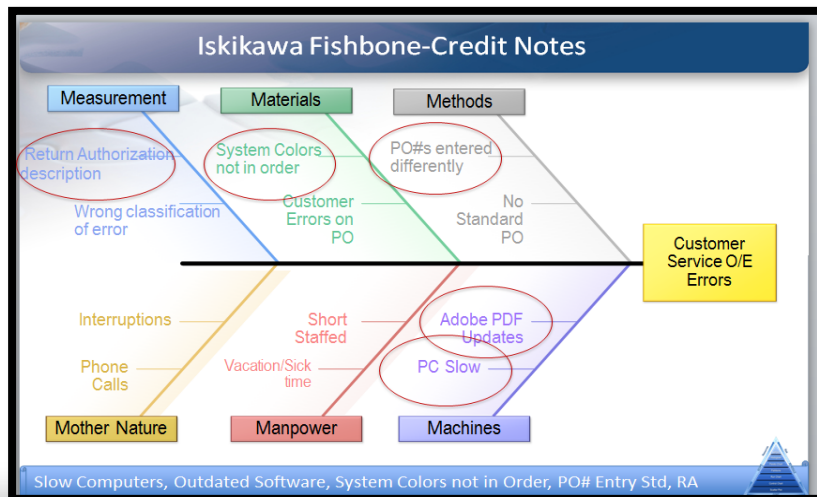

Ishikawa Fishbone Diagram

Overview- Cause-and-Effect diagram to provide structure to cause identification, ensures that balance list of ideas have been generated during brainstorming

When To Use- Once a focused operational definition of the problem exist, or during brainstorming to prevent future problems from happening (proactive)

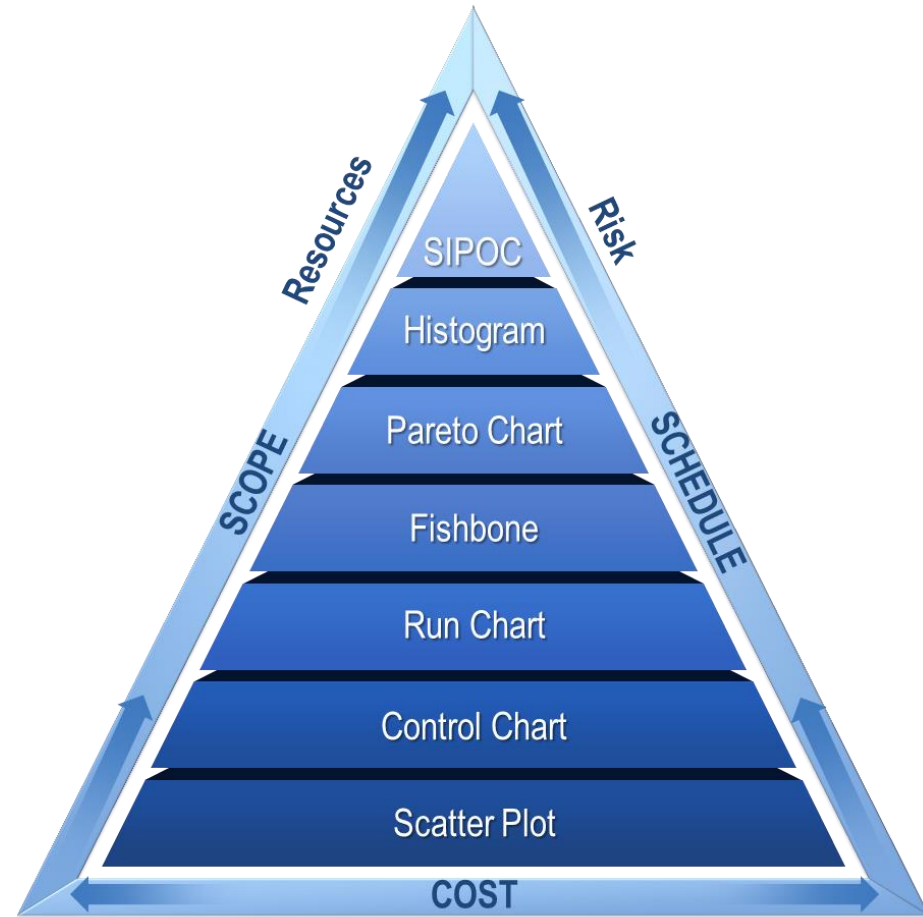

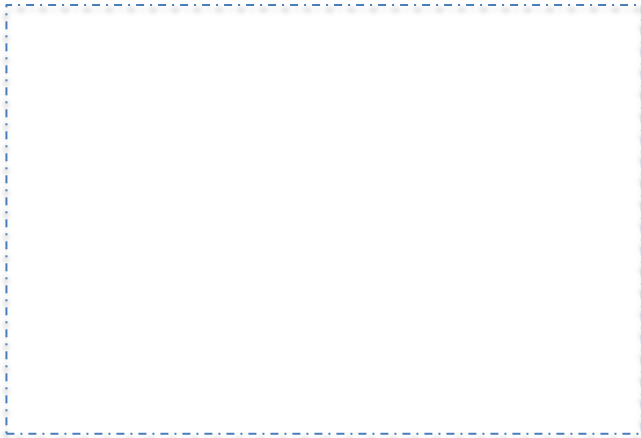

Result- Allows focused discussion of most critical causes for further investigation

Overview:

When To Use:

Result:

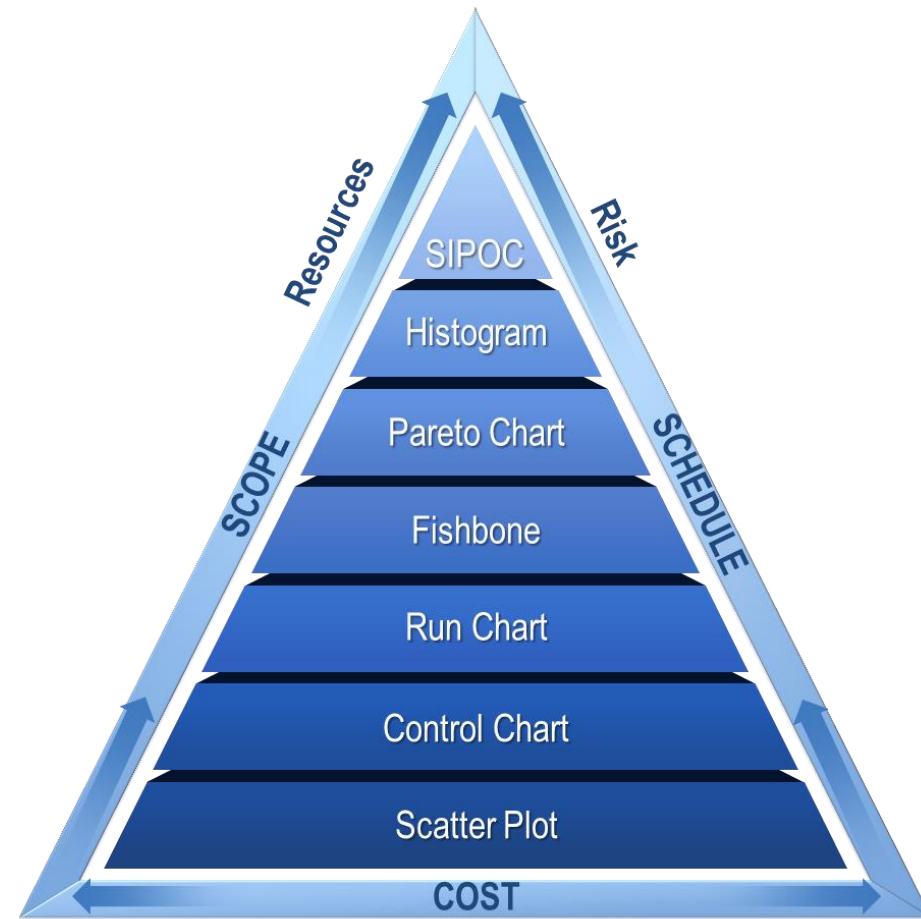

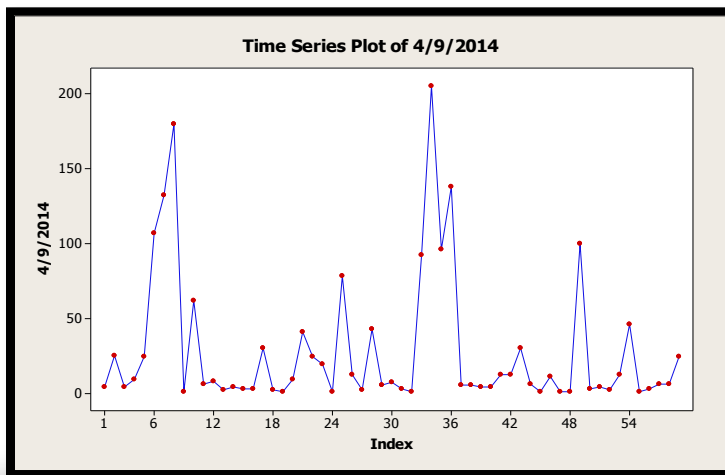

Run Chart

Overview- Is a time series plot used to show data points in the order in which they occur, also shows how the process changes over time

When To Use- When getting to know the process, easy to construct b/c you don't know as many points for a control chart

Result- Used to detect trends in the data, also can easily see significant changes in the data which can be attributed to the underlying process

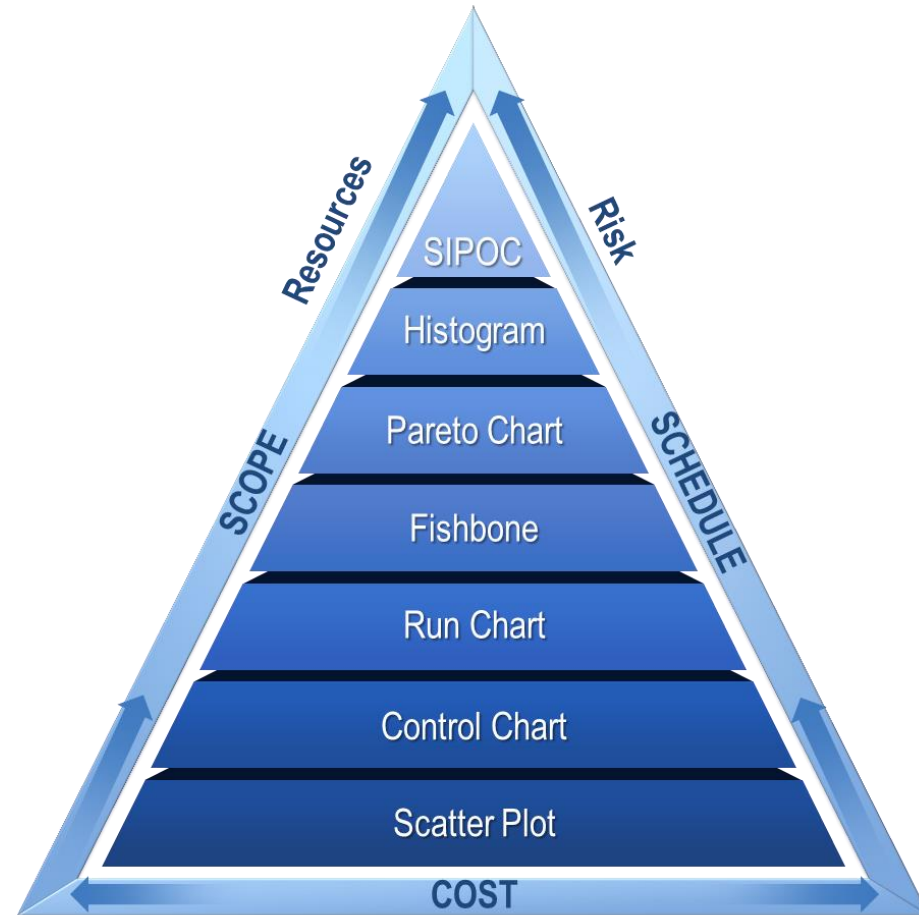

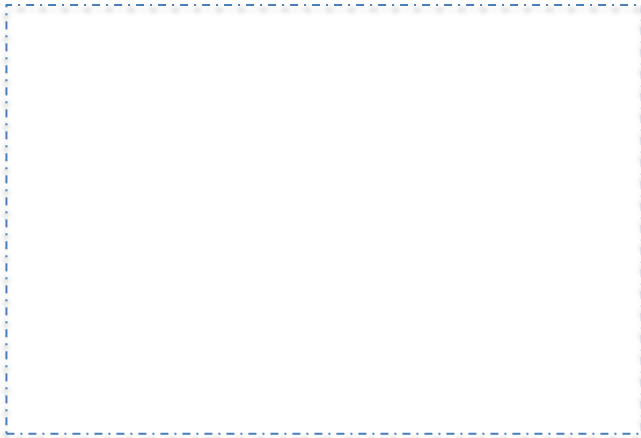

Control Chart

Overview:

When To Use:

Result:

Control Chart

Overview- Similar to run charts, but also displays the average, control limits (Upper & Lower) which are ± 3 standard deviations of the average (99.7% of the points in normally distributed data will fall between the limits)

When To Use- To establish a process measurement baseline, detect special cause variation, ensure process stability, and enable predictability

Result- Continuous or Discrete Data Analysis

X-R=Continuous when the sample size of each subgroup is approx. <10

I-MR= large sample size for more sensitive charts

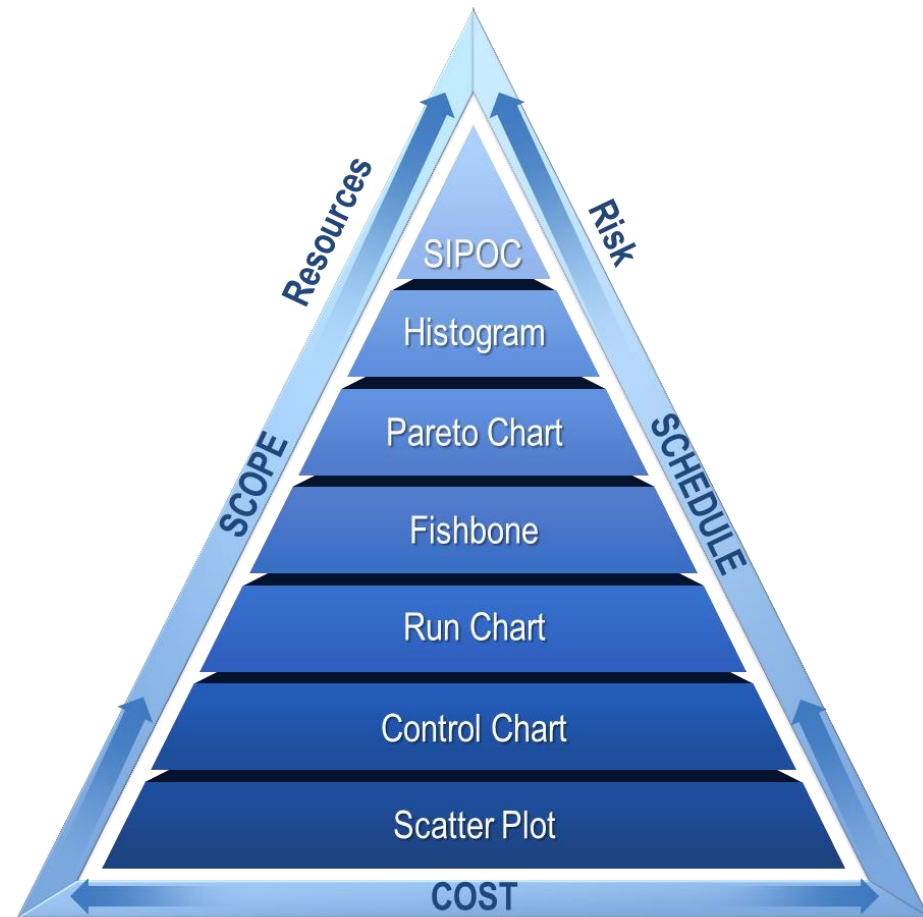

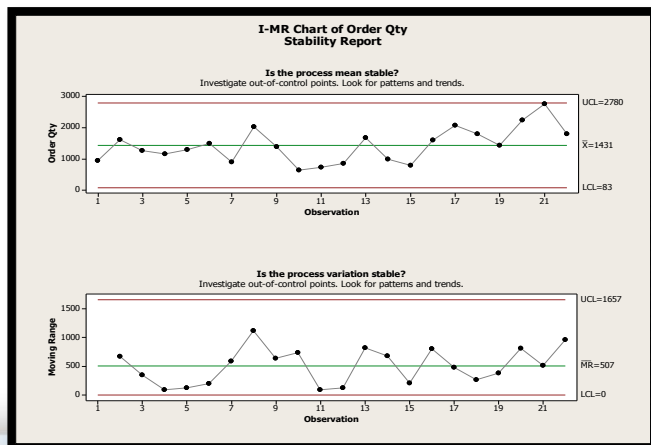

X-s Chart

P Chart

u Chart

np Chart

c Chart

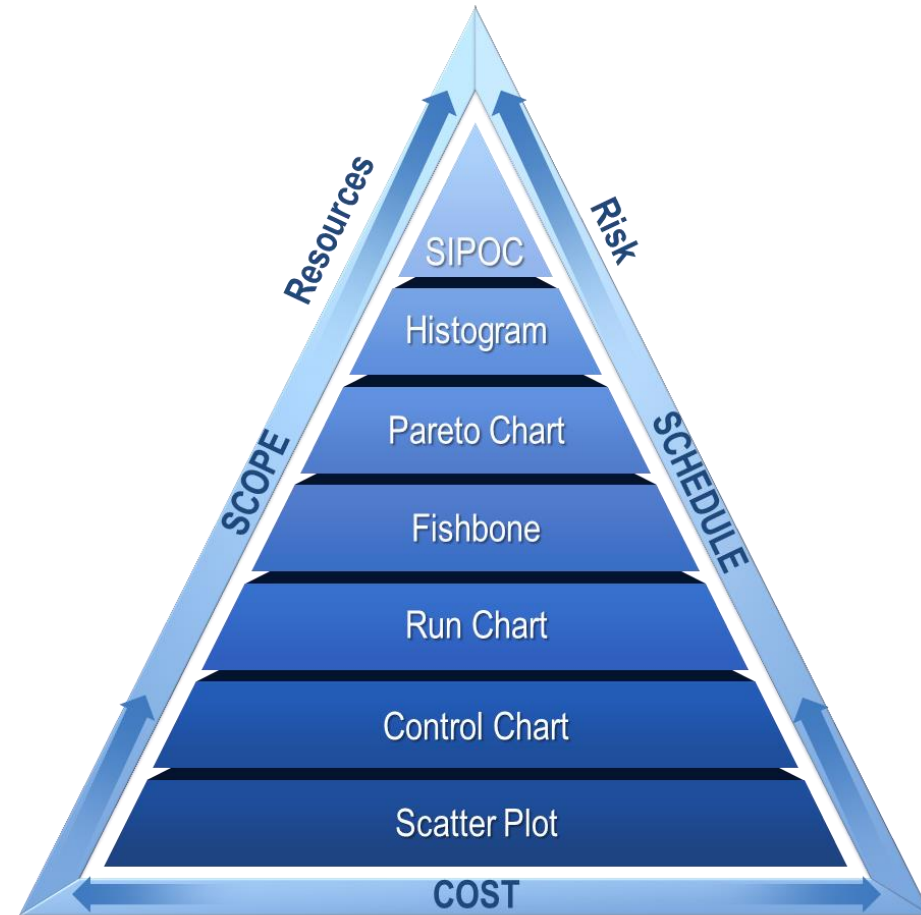

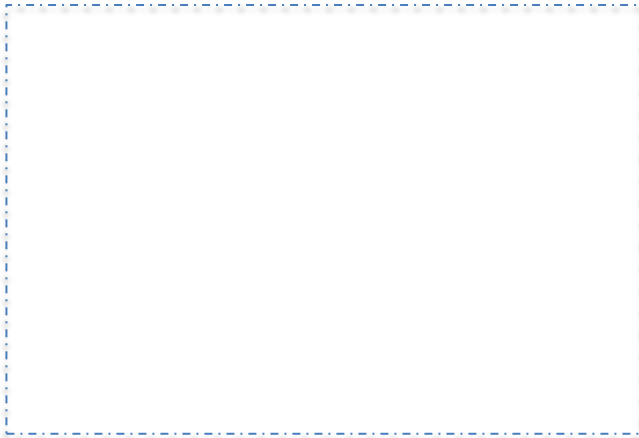

Scatter Plot Diagram

Overview:

When To Use:

Result:

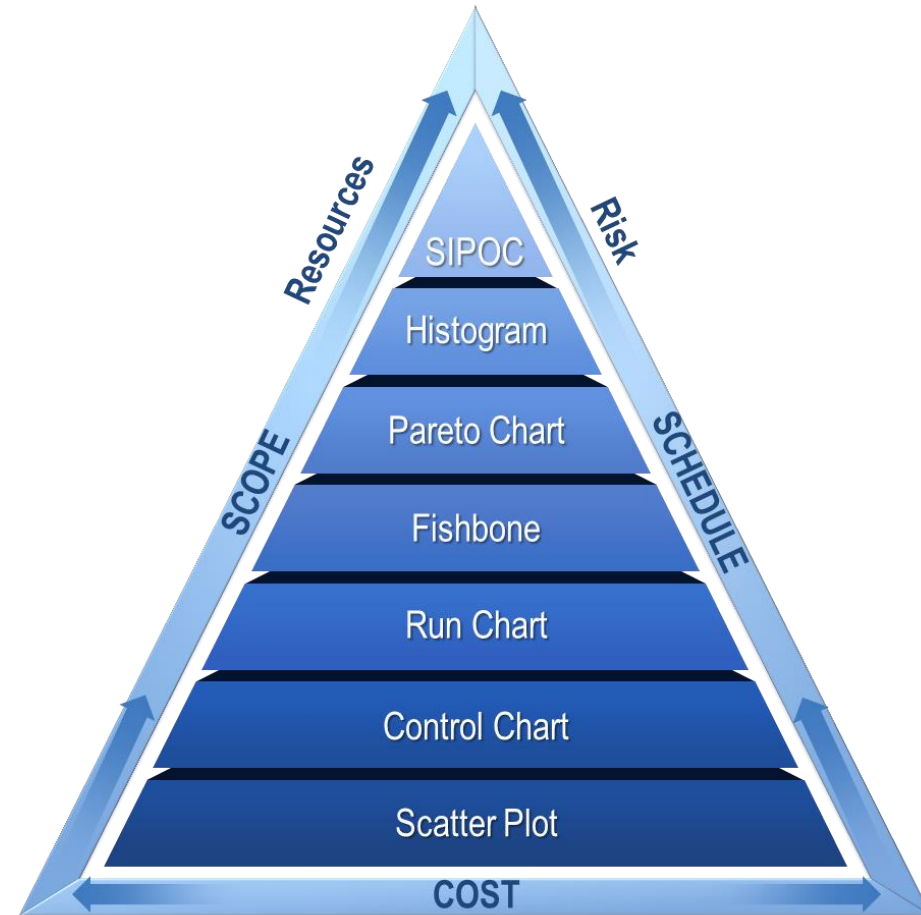

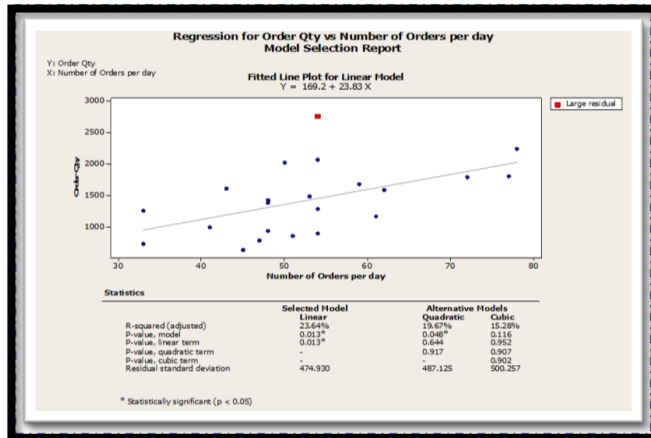

Scatter Plot Diagram

Overview- A graphic that shows correlation between two variables through patterns in data

When To Use- To determine if there is a statistical relationship between two independent variables

Result- No Correlation, Positive Correlation, Negative Correlation, Other

Run Chart

Time Series Plot of 4/9/2014

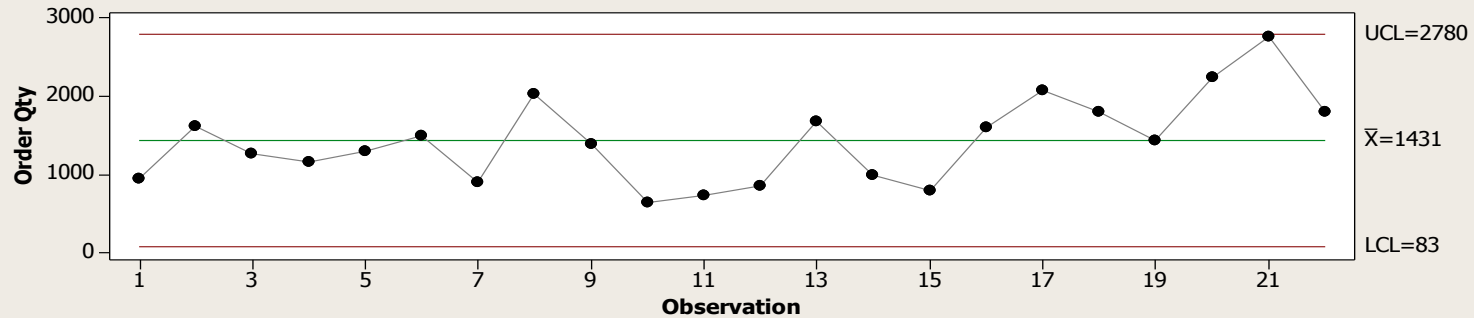

Control Chart

I-MR Chart of Order Qty Stability Report

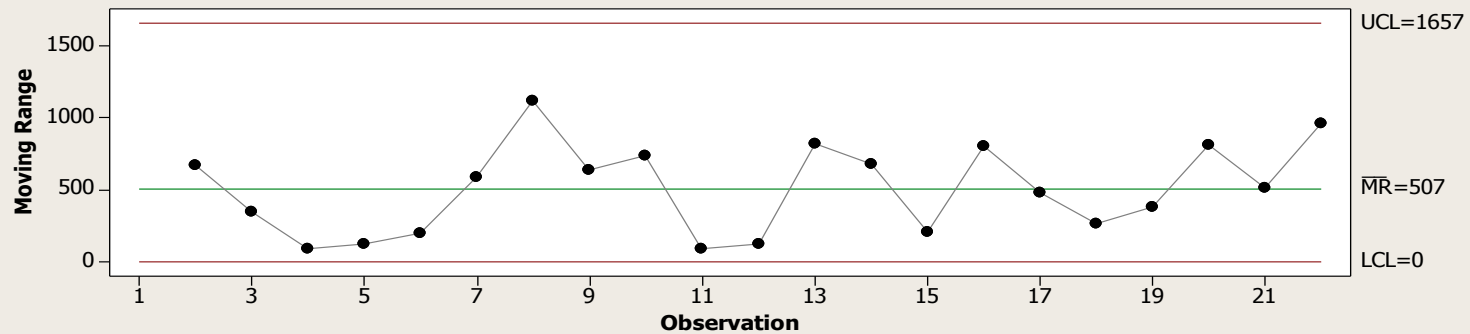

Is the process mean stable?

Investigate out-of-control points. Look for patterns and trends.

Is the process variation stable?

Investigate out-of-control points. Look for patterns and trends.

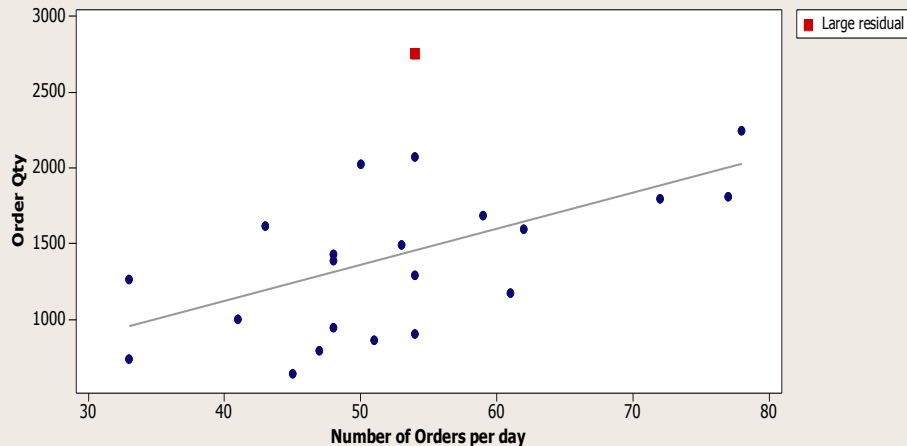

Scatter Plot

Regression for Order Qty vs Number of Orders per day Model Selection Report

Y: Order Qty
X: Number of Orders per day

Fitted Line Plot for Linear Model

$$Y = 169.2 + 23.83 X$$

Statistics

	Selected Model	Alternative Models	
	Linear	Quadratic	Cubic
R-squared (adjusted)	23.64%	19.67%	15.28%
P-value, model	0.013*	0.048*	0.116
P-value, linear term	0.013*	0.644	0.952
P-value, quadratic term	-	0.917	0.907
P-value, cubic term	-	-	0.902
Residual standard deviation	474.930	487.125	500.257

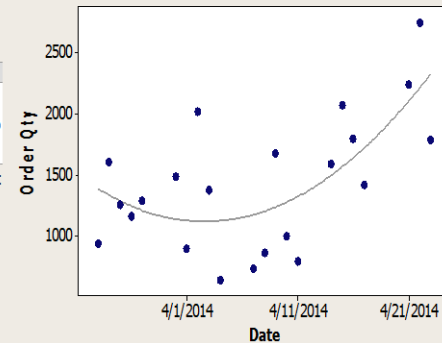

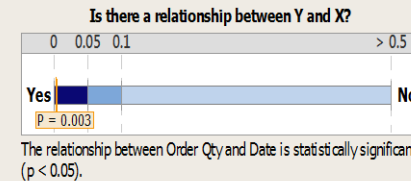

* Statistically significant ($p < 0.05$)

Regression for Order Qty vs Date Summary Report

Y: Order Qty
X: Date

Fitted Line Plot for Quadratic Model

$$Y = 5.08E+09 - 243328 X + 2.915 X^{**2}$$

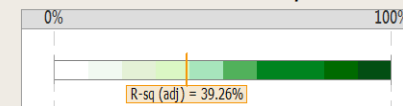

Comments

The fitted equation for the quadratic model that describes the relationship between Y and X is:
 $Y = 5.08E+09 - 243328 X + 2.915 X^{**2}$
 If the model fits the data well, this equation can be used to predict Order Qty for a value of Date, or find the settings for Date that correspond to a desired value or range of values for Order Qty.

A statistically significant relationship does not imply that X causes Y.

% of variation accounted for by model

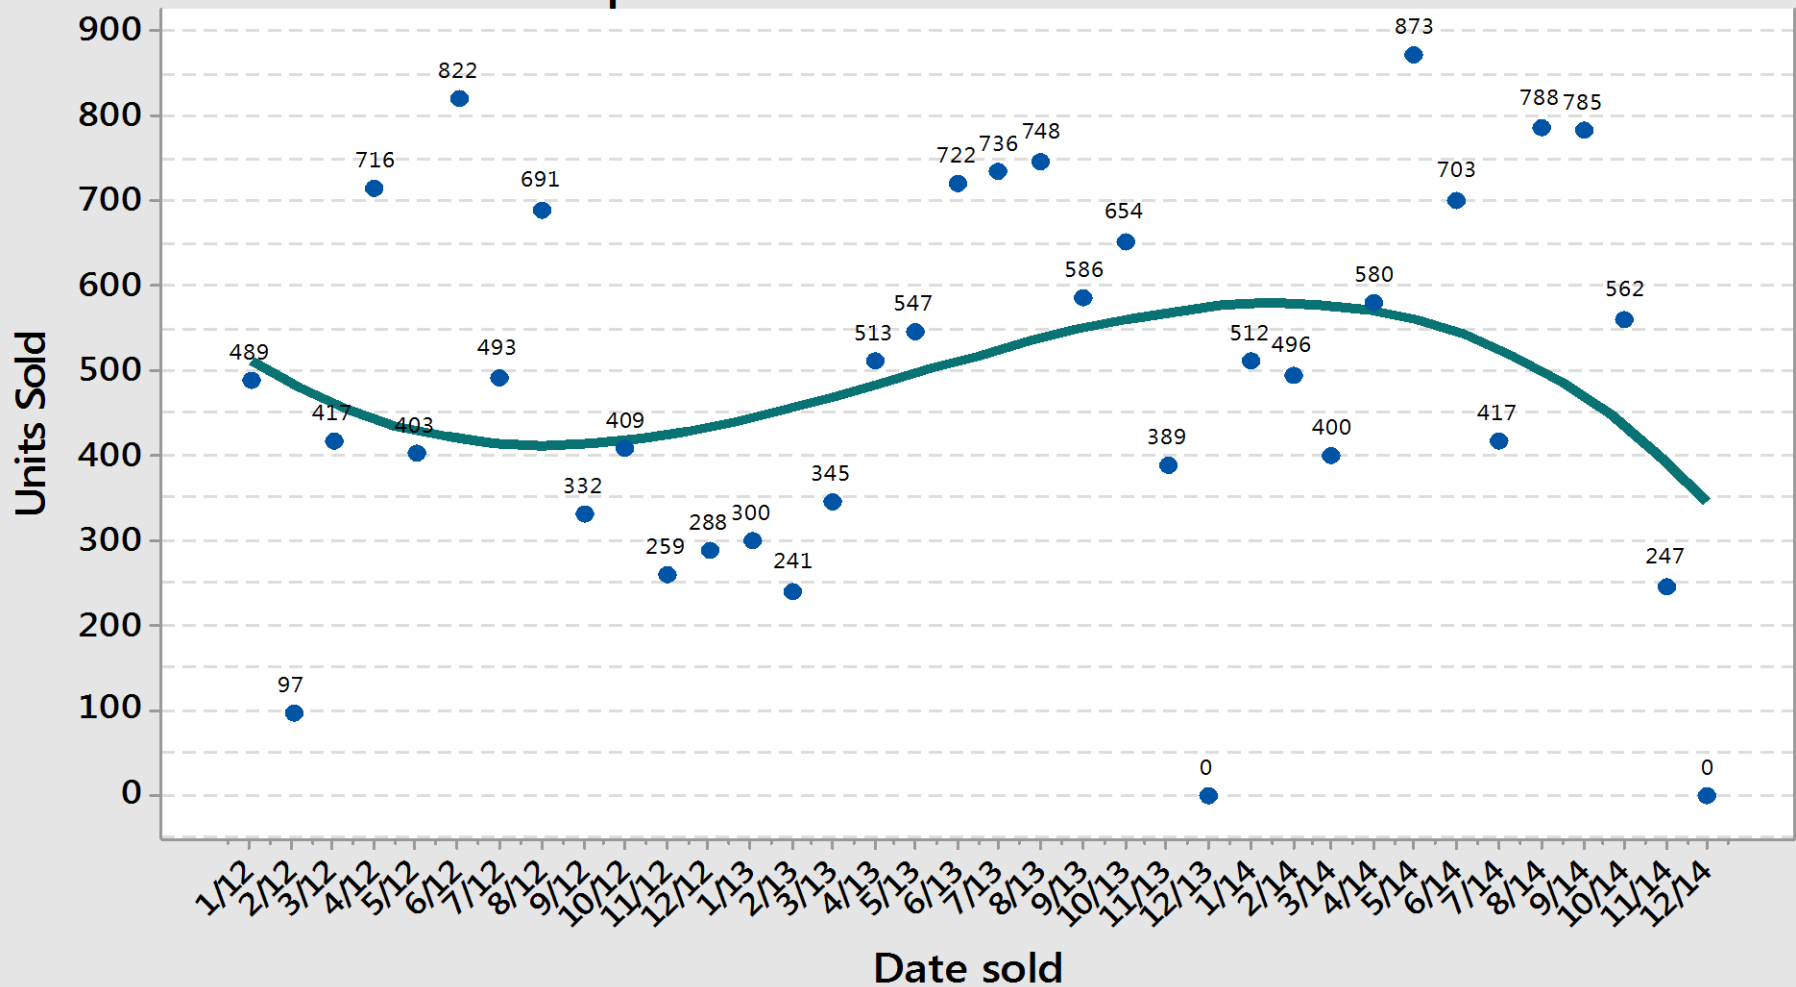

39.26% of the variation in Order Qty can be accounted for by the regression model.

Scatter Plot

Scatterplot of Units Sold vs Date Sold

Results from Daily Order and Shipping Improvement

Pickup Time 5:30PM

Quality Tools

Run Chart

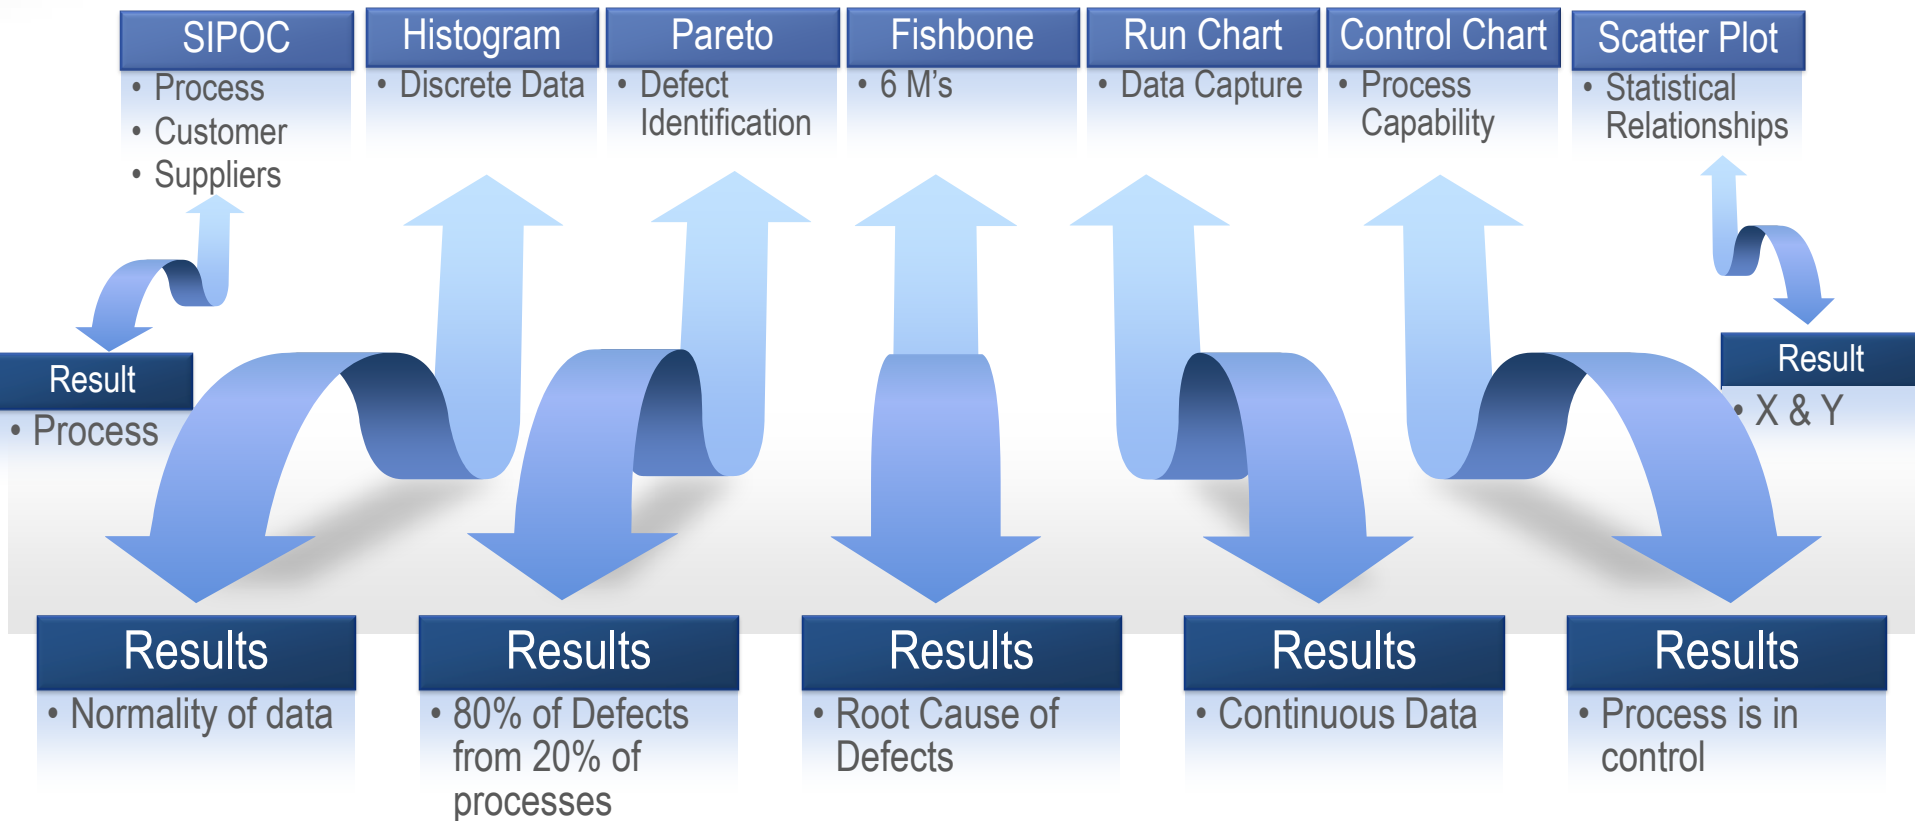

Control Chart

Scatter plot

- Setup cut off times
 - Noon for order >50 (ship next day)
 - 2pm for order <50 (same day)
- Added resources on day crew
- Added night crew to process orders
- Determined there is an relationship between
 - Order QTY & Date
 - Unit Sold and Date Ordered
- Avg. Number of Units per day is 1431 Units

7 Basic Quality Tools

Had a positive impact on the business by providing the Product Director the data analysis tools to make fact based decisions
